ABOUT US

The theme of the project is a travel blog. On the site, the author can post photos, articles, talk about himself, and users, in turn, exchange opinions and learn a lot about the world around them.

FUNCTIONALITY OF THE SITE

1. **HOME PAGE.** Having entered the site, the first thing that catches your eye is the main page. The functionality of the main page includes a navigation bar in the header of the site, a little information about us and contacts for feedback.

About Us

Well, travel is about exploring the unknown, but with our travel blog you can travel virtually.

From our travel blog you can see the photos and read description of this place and read comments of traveler and choose the place of your dream to travel.

Thank you for being with Us!

Every day 24/7

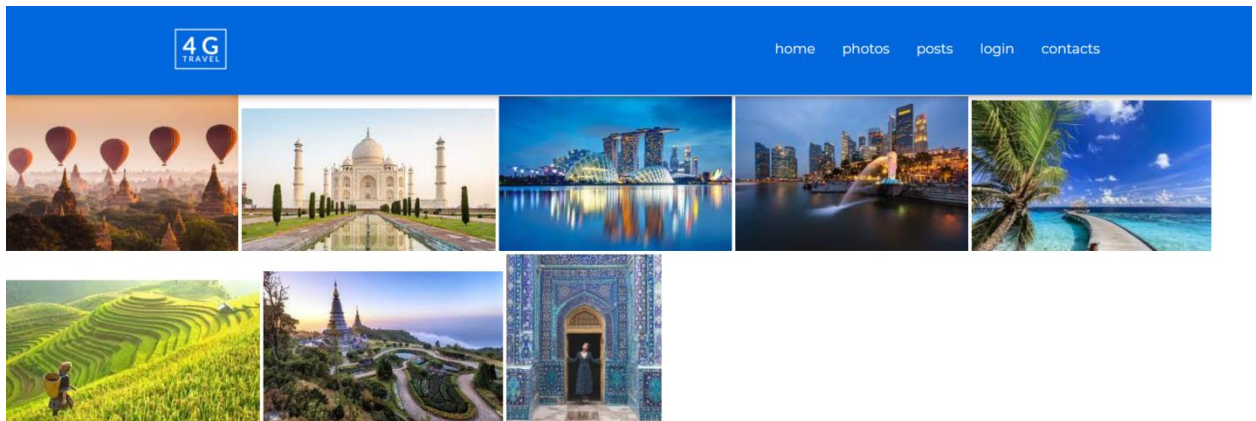

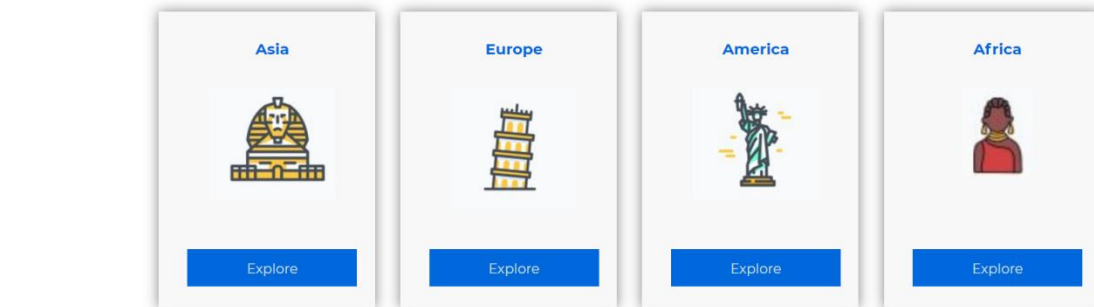

4G TRAVEL

info@4gtravelblog.uz

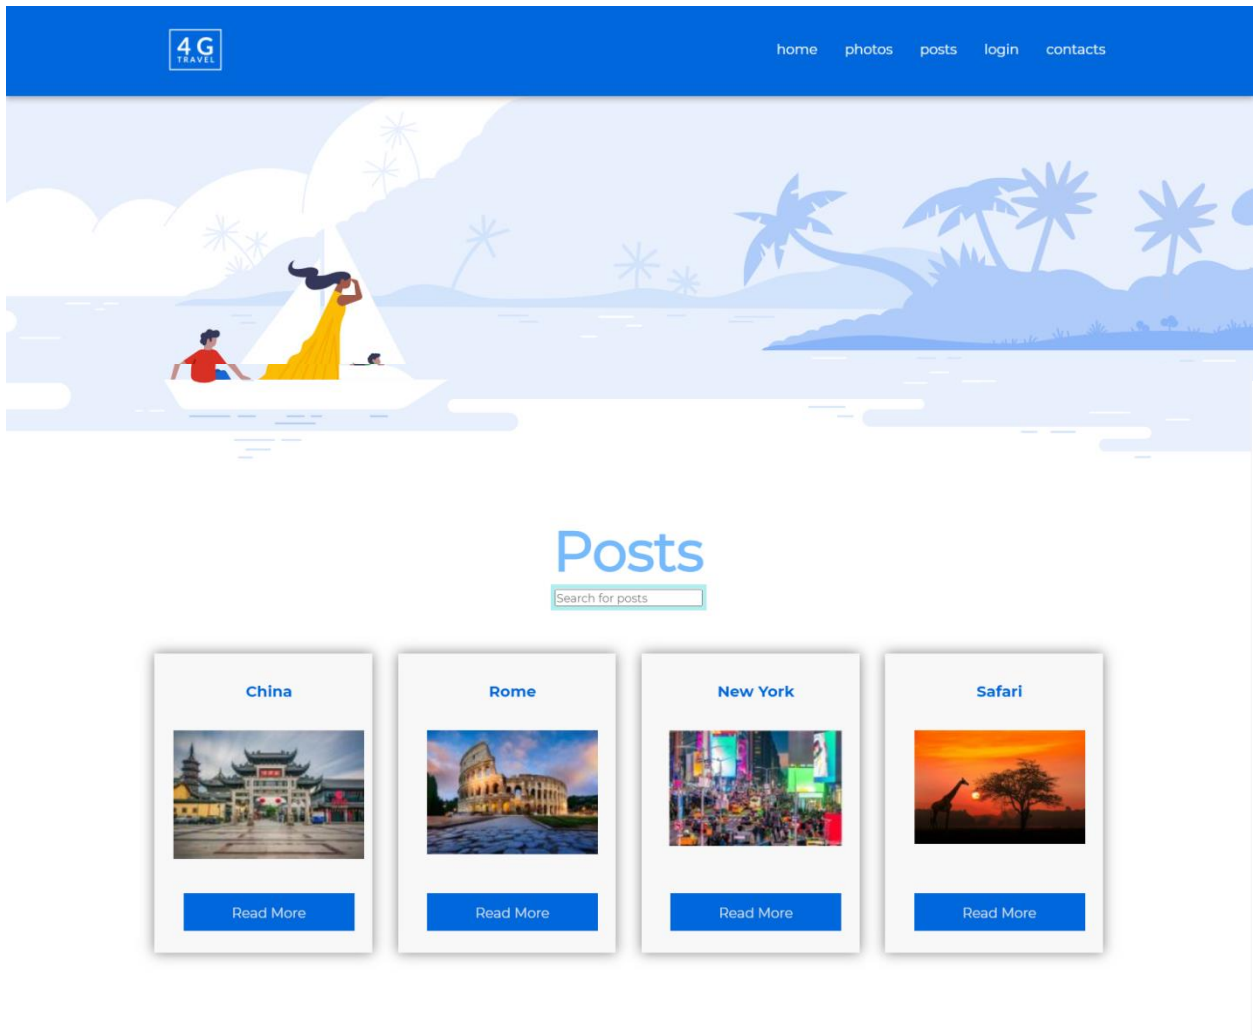

2. **NAVIGATION BAR.** A navigation bar is present in every part of the site and helps the user cross the website without much difficulty.

3. **PHOTOS.** This section is a small gallery. All photos are sorted into albums and united by a specific theme.

4. **POSTS.** In addition to the gallery, which contains only photos, the site has a "posts" section. It is in it that the main essence of the site lies. In the beginning, as in the previous section, there is navigation through the articles. The search capability is also included.

The article itself includes a block with constantly changing pictures, several paragraphs about the topic, and a window for comments.

ROME TRAVEL GUIDE

Geography

The geography of China is very diverse. Even though China is the most heavily populated country on the planet, it also has some of the most remote and least populated places in the world. This is reinforced by the fact that the vast majority of the population lives on the east coast of the country, making the western provinces sparsely populated.

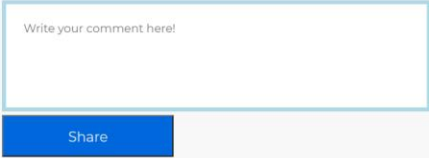

Events and Festivals

China has three "Golden Week" holidays per year. People get a mandatory two or three days off work for each holiday, and workers' companies can grant them the rest of the week off, making each holiday a total of 7 days. As you can imagine, having almost 1.4 billion people with the same days off can make travelling at these times arduous to say the least.

Travelling during the Spring Festival/Chinese New Year is incredibly difficult. Chinese New Year is China's Christmas, so the millions of migrant workers and students flood back to their home towns. Everybody else takes the opportunity to spend their hong bao (gifts of money traditionally given at CNY) and go travelling. Most of the time, since you are only allowed to purchase train tickets 6

things more unbearable than the hot and dry weather further north. Winters here are usually less cold, but freezing temperatures and snow do occur. Summertime sees more rain in this area as well. This also applies to the mountainous parts in the central west, with Tibet being relatively wet in July and August. Winters here can get almost as cold as in the north.

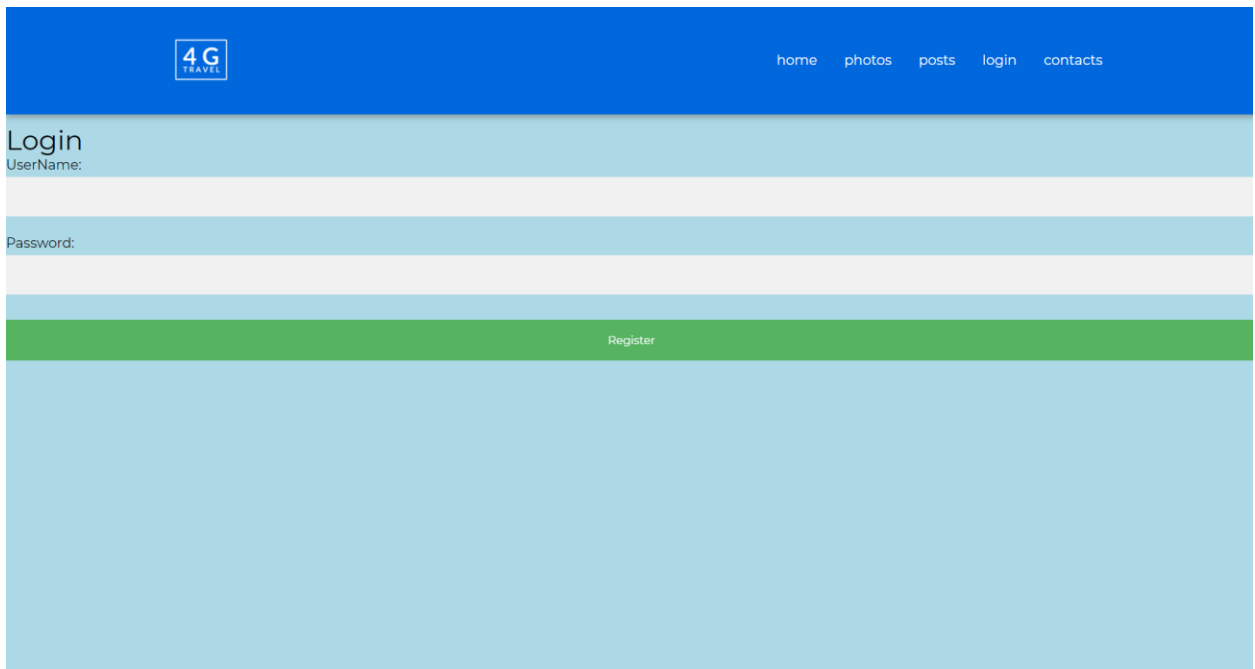

The south of China has warm and humid weather year round, but even in Hong Kong it is not uncommon for temperatures to drop below 5 °C in winter. Normally it is more like 20 °C, though. Tropical storms hit the Chinese coast occasionally during the July to September period and the hot and humid weather make this time of year not a good time to visit.
